

ALUMINIUM MAINTENANCE

This metal, known for its stability, can resist frost, high temperatures and prolonged exposure to the sun.

Easy to clean as follows: dust the surface with a soft cloth, then use cold water and a non-aggressive or non-abrasive detergent (neutral soap is fine). Do not bleach.

During cleaning, avoid circular movements and proceed in a linear direction (vertical or horizontal), then rinse and dry well.

For proper maintenance, clean thoroughly at least once a year (preferably before the winter season).
