STRUCTURAL COMPONENTS

OUTDOOR UPHOLSTERED MODULAR COLLECTION

Supporting structure in solid Okumé wood, seat upholstery in hemp fabric and padding in Dryfeel foam for outdoor use. Available with single- or doublefabric in different colours. For all items of the REUSE collection consisting of two different fabrics (double-fabric), the selling price is determined by the fabric category with the higher price. Once the individual elements are combined and attached together, the size of the composition may vary by a few centimetres compared to the dimensions indicated in the price list due to the padding, which does not allow for precise volumes.

OUFIT COVER: The covers are suitable for the protection against the atmospheric agents. They are custom-made pieces according to the sofa composition chosen by the customer. Sofa and covering are produced at the same time and are composed 50% of polyester + 50% of polyurethane fabrics, with a density of 190 gram per square meter. The polyester fabric is light-grey and has one side of acrylic resin coating, which makes the fabric water and oil proof. These coverings have been designed and created to resist the direct water passage according to the technical standard UNI-EN-ISO 811, the water permeability and the water column test higher than 1000 mm.

CHARACTERISTICS OF THE MATERIALS
